

Office of Clean Energy
Combined Heat & Power (CHP) 2005 Program

The Office of Clean Energy will be providing financial incentives for Combined Heat and Power (CHP) installations to enhance energy efficiency through on-site power generation with recovery and productive use of waste heat, and reducing existing and new demands to the electric power grid. This program will meet the objective of the New Jersey Clean Energy program to use energy efficiency, and clean distributed generation to provide reliability solutions for New Jersey. The program's goals are to increase energy efficiency, reduce overall system peak demand and to encourage the use of emerging technologies.

This program offers qualifying customers, contractors, and energy service companies' incentives to purchase and install various types of CHP units. To qualify, the customer's facility must be located in New Jersey, the customer must purchase electricity from the utility grid, and must be an electric or gas customer on a eligible tariff. Incentives are paid out only up to 1 MW of capacity.

The application process begins with an initial application and reservation request and ending with final project inspections and interconnection verifications. Incentives will vary and be based on CHP technology, type, project size and total project cost. The submittal date for applications will begin on June 15, 2005 and end on August 15, 2005.
